

Jiaheng Li

Full-Stack Software Engineer

odell.lijiaheng@gmail.com · 027 295 9309

Portfolio · GitHub · Auckland, New Zealand

Open Work Visa · valid until 25 February 2029 · no sponsorship required

Available immediately · open to relocate

At a Glance

Target Role: Full-Stack Software Developer

Backend: C#/.NET · Java/Spring Boot · REST APIs

Databases: SQL · PostgreSQL · Oracle · MongoDB

Experience: 3 years · Java: 2 years · .NET: ~1.5 years

Frontend: React · TypeScript · HTML/CSS/JavaScript

Delivery: Git · GitHub Actions · Docker · CI/CD

Delivers finance SaaS, structural-engineering software, and commercial websites, turning client requirements into production systems through implementation, testing, and release.

Professional Experience

Freelance Web Developer

Independent client projects

- Haven Build Group** (havenbuildgroup.co.nz): Delivered a responsive React/TypeScript website on Vercel, guiding a non-technical client through requirements and content planning.
- Bird & Yang** (birdyang.co.nz): Improving the website's visual design, UI, and animations using native HTML, CSS, and JavaScript.

Skyline Consulting Engineers Limited

Oct 2024 – Dec 2025

Part-time Full-stack Software Developer · Auckland

- Converted an Excel-based beam-calculation workflow into a structured C#/.NET, React/TypeScript, and PostgreSQL system, giving engineers a maintainable foundation for calculation work.
- Clarified inputs, outputs, and validation rules with structural engineers, then verified results through analytical benchmarks, equilibrium checks, and stakeholder testing so releases matched engineering expectations.

Optimal Drainage & Traffic Services Limited

Jun 2024 – Oct 2024

Part-time IT Support · Auckland

- Managed computers, user accounts, and application access for a 10-person team; organised digital evidence for management and legal advisers.

Yonyou Network Technology Co., Ltd.

Mar 2022 – Dec 2023

Junior Backend Developer (Java) · Zhengzhou, China

- Built Java/Spring services, accounting forms, and REST integrations for a multi-tenant finance SaaS ERP, supporting cross-system workflows across Oracle, PostgreSQL, MongoDB, and Kafka.
- Delivered a separate migration service processing up to approximately one million records daily through incremental extraction, data transformation, MyBatis/MyBatis-Plus, and parallel processing.
- Built a Spring Boot gateway that enabled quick login between enterprise modules and a Kafka message-push module that handled workloads above 100,000 records through thread-pool processing.

Selected Engineering Work

StructLedger	Released a production beam-calculation SaaS that makes engineering calculations available through a web workflow, with .NET/PostgreSQL on Railway, React/TypeScript on Cloudflare, Google sign-in, and CI/CD. Live product
p2p-lockstep-kit	Built a reusable TypeScript/WebRTC session toolkit now powering four live browser games, with deterministic synchronisation, reconnect recovery, an AI build skill, and multiplayer Mahjong. GitHub · Gomoku · Chess · Xiangqi · Mahjong
NX-Cast	Turned a Nintendo Switch into a media receiver for TVs without native casting, supporting DLNA, IPTV, and AirPlay 2 through C/libnx, hardware-accelerated libmpv playback, and automated releases. GitHub · Technical notes

Education

Master of Information Technology

Jul 2024 – Nov 2025

University of Auckland

Bachelor of Network Engineering

Sep 2018 – Jun 2022

Henan University
