Recommendation for Jiaheng Li

16 July 2026

To whom it may concern,

I am pleased to recommend Jiaheng Li, who worked with Skyline Consulting Engineers Limited as a part-time Full-stack Software Developer from October 2024 to December 2025. During this period, he was our only software developer and was responsible for building a beam calculation book system for our structural-engineering work.

Jiaheng performed very well in this role. Our company is led by civil and structural engineers, and the original workflow existed mainly as an Excel workbook. The requirements were incomplete and often difficult for our team to explain in software terms.

His strongest contribution was requirement discovery. He learned how our engineers completed beam calculations, asked focused questions about inputs, outputs, and uncertain cases, and translated our explanations into clear software requirements. He also learned relevant structural-engineering concepts so that he could communicate with us accurately and keep the project moving.

Jiaheng then took ownership of the system's development, testing, and delivery. He worked independently, communicated progress and problems clearly, and remained patient when requirements changed. The system moved an important engineering workflow beyond the original spreadsheet and provided a more structured foundation for future development. His responsibility, persistence, technical ability, and communication skills impressed me.

I confidently recommend Jiaheng for software development or full-stack engineering roles. He is especially effective when a project requires someone to understand an unfamiliar business domain, work with non-technical stakeholders, and turn uncertain needs into practical software.

Please contact me if you require any further information.

Hongchang Zhang
