Software Engineering Intern | Digital Assets & Fintech

Open Work Visa to 25 February 2029 | No sponsorship required | Available immediately

At a Glance

Experience: 3 years commercial development

Go: Kademlia DHT implementation

Backend: Java/Spring, C#/.NET, REST APIs

Data: SQL, PostgreSQL, Oracle, MyBatis

Distributed systems: P2P, multicast, concurrency

Domain: Finance SaaS/ERP; blockchain knowledge

Software developer with finance-focused SaaS experience and a strong foundation in blockchain principles, peer-to-peer networking and distributed systems. Combines commercial API and database work with a Go DHT thesis and postgraduate protocol implementation.

Relevant Commercial Experience

Yonyou Network Technology Co., Ltd. | Junior Backend Developer Zhengzhou, China | Mar 2022 - Dec 2023

Built Java/Spring services, accounting forms and REST integrations for a multi-tenant finance SaaS ERP, supporting workflows across relational databases and enterprise modules.

Implemented a Spring Boot quick-login gateway and a Kafka-backed message-push module handling workloads above 100,000 records through thread-pool processing. Used MyBatis and parallel processing for data transformation and migration.

Skyline Consulting Engineers Limited | Part-time Full-stack Developer Auckland | Oct 2024 - Dec 2025

Translated structural engineers' calculation workflows into C#/.NET APIs, React/TypeScript UI and PostgreSQL data models. Verified results against analytical benchmarks and worked directly with engineers to clarify requirements and validation rules.

Selected Systems Work

[Go Kademlia DHT](#) | Undergraduate thesis

Implemented all four peer-discovery RPCs, XOR-distance routing and concurrent queries. Integrated the DHT with a torrent-download session; documented peer discovery, packet captures and torrent downloading.

[Total-Order Multicast](#) | C# postgraduate coursework

Implemented a multicast protocol and tested consistent delivery ordering across five processes under simulated network delays. Completed and successfully assessed coursework.

[P2P Lockstep Kit](#) | TypeScript / WebRTC

Built reusable peer-to-peer game sessions with deterministic synchronisation, state management and reconnect recovery; supports multiplayer Mahjong.

[Blockchain & Decentralized PKI](#) | Postgraduate research

Researched lightweight blockchain-based certificate issuance, validation and revocation, including smart-contract concepts and security trade-offs. Unpublished coursework research, not commercial blockchain development.

Education & References

Master of Information Technology | University of Auckland | Nov 2025

Bachelor of Network Engineering | Henan University | Jun 2022

Former employers are willing to provide references. [English project evidence and technical notes](#).
